

EXZOSOME THERAPY IN CHRONIC GVHD IN 10 CASES

Mehrdad Payandeh, Mehrak Payandeh

Medipol University of Dentistry; Kermanshah University of Medical Sciences, Iran

Here reported the results of exzosome therapy as an special treatment policy in chronic GVHD multiple case of leukemia allogeneic transplantation that complaint of pruritus, diarrhea, generalized on/off rash with increased liver enzymes with cholestatic pictures.

After three course with one month's division the symptoms, signs and laboratory abnormalities significantly corrected.

Not any side effect was seen.

Exzosome therapy with good penetration compared to mesenchymal in liver can be one of the topic of combination therapy in GVHD compliance.
